Abstract
This research is to discuss about the corporate governance effect in domestic listing companies of Taiwan. It focus the relationship of the firm performance with the board of directors and the ownership structure, the study period is from 2003 to 2007, choose 213 electronic companies, 68 petrochemical companies and 29 mechanical companies, sums of 1555 year observation. The research purpose of this thesis is to understand that the relationship of the independent director ratio, board of directors' size, insider ownership, institutional ownership ratio with the firm performance. The thesis uses descriptive statistics, independent sample t test, correlation coefficient and regression analysis to analyze the secondary data.

According to the empirical result, the electronic industry, petrochemical industry and mechanical industry have different results with the four kinds of performance indexes. As to the electronic industry, the make up of the board of directors, the company sets up the independent director has performance, and the high independent director ratio the performance will be better. The size of the board of directors is bigger, it will be unfavorable with the company's performance. The relationship of the ownership with the insider and institutional investor with company's performance accords with the research assumption.

The composition of the board of directors in petrochemistry industry, it is doesn't set up the independent director will have better performance, and the higher ratio of the independent director's will be worse for the company's performance and the size of the board of directors have bigger , the bad company performance will be better.

The relationship between the structurce of the ownership with the insider and the company performance is statistically significant, accord with the anticipated direction of the hypothesis. The relationship of the institutional investor ownership with company performance is significant, and the influence direction is more positive related, accord with this research hypothesis.

As to the mechanical industry, make up the respect in the board of directors, all indexes are not significant and the influence directions are different.

In the relationship of the insider and the institutional investor ownership to the company performance, the insider part is not significant. The institutional investor is significant, and it accord

with this research hypothesis.
Summary of the results, when the industry is different, the influencing factors of company performance may be dissimilar, and the influenced results may be inconsistent.
