Abstract
The medical environments are more peculiar than other industries in Taiwan, in terms of the history and government rules and law.
In recent years, information explosion, medical technique development, government made medical law and the National Health Insurance (NHI) program have affected and changed the whole medical environment. Therefore, medical organizations must adapt the changes to hold the chances.
This research was focused on interhospital cooperation modes for hospitals with multiple ownership systems. Under the modern medical environments, medical organizations should think about how to have different management modes for interhospital cooperation causing better effect on management and competition which both create sustainable management.
In this research, the on-the-spot interview for the cases of the differently ranked hospitals with the multiple ownership systems was to investigate how to develop the cooperation motive under the original management philosophies and the biggest asset and advantage under the multiple ownership systems.
The result revealed: 1. the differently ranked hospitals with the different cooperation motives; 2. the differently ranked hospitals with the different decision modes for interhospital cooperation; 3. the different cooperation modes with the different cooperation time predicted; 4. the different cooperation modes with the different employee identifications; 5. the differently ranked hospitals with the different cooperation effects; 6. the different cooperation modes with the different cooperation effects.
