Vocational choice

Abstract
This research has adopted a questionnaire survey method, taking self-supporting students working at self-management stations of China Petroleum & Chemical Corp. at Tainan district as a sampling object, to discuss on the relatedness of work values to their future vocational choice. In other words, the main subject is on self-supporting students working in self-management stations of China Petroleum & Chemical Corp., to discuss on their view on future vocational choice.
The data acquisition method of this research was primarily assisted by the gas station stationmasters. After being chosen the sampling stations of self-management stations of China Petroleum & Chemical Corp., I then distributed the questionnaires integrity to self-supporting students at the sampling stations, and carried out the collection of questionnaires and investigation.
This research has adopted the SPSS statistical software as the statistical analysis tool. The main findings are listed as follow:
1. Based on individual characteristics (age, current education system) of self-supporting students at Tainan district's self-management gas stations of China Petroleum & Chemical Corp., there is a remarkable difference of their future different vocational choices to work values.
2. Based on individual characteristic (age) of self-supporting students at Tainan district's self-management gas stations of China Petroleum & Chemical Corp., there is a remarkable relatedness of their future different vocational choices to work values.
3. The sub-form of the work values of self-supporting students has a remarkable influential to multiple regression analysis of vocational choice.
Based on the above conclusion of this research, I would like to forward my proposal separately to the government, schools, enterprises and future researches to serve as a reference.
Key words: Work values, career development, vocational choice
