SKYPE API

Abstract
This research is using multi-channel to improve conventional digital television system, our goal is enable end-user and system agency can possess management system for communication and coordinating. In this thesis, the Ethernet is the main Intranet in internet which was integrated software and hardware into assisting system and system proprietor in order to lower cost and constitute the intact adding value network service system. This research can solve the problems of signal of digital satellite television and integrate of software and hardware.
The phase of internet phone, we demonstrated the initiating video conference with the application program interface (API) of Skype. Skype has a number of advantages, such as Skype is the internet voice application software and the application developers can save time and cost in internet voice programming. Hence, the system developers can focus on the application features.
