Profile

Abstract
A system named “Nice2CU”is proposed to manage and update the personal information with others. It contains a computer, Tag/Reader of RFID (Radio Frequency Identification), HMD (Head-Mounted Display) and portable minicam.

Two interface Card Interface and Mirror Interface are implemented in this system. The card interface in used to collect the personal information from the user’s name card. The name card that contains a RFID Tag is read by a RFID reader. The mirror interface is constructed by hiding a minicam in the back of a mirror. When the system user stay in front of mirror, the user shape image will be caught and then transferred to the friend by internet. This process will improve the accuracy of face recognition.

The system recommends the subject that might be interesting to the person or introduced other who has the same hobby according to documentary. Here the circle of user’s social life might be broadened as well. Due to the limitation of time, the implementation was not conducted as long as we expected. However, we set up 12 characters and lots of scenarios and interactions that might happen in 8 months in order to bring out the consequence of this experiment. The result was found the system can enhance the user to extend the circle of social life and improve the interpersonal relationship.
