Keyword
Safety-hygiene knowledge
Safety-hygiene attitude

Abstract
The purpose of this study was to understand the relationship between safety-hygiene knowledge and attitude toward workplace in the case of Southern Taiwan University. The study also explored whether personal demography would effect on the differences of both safety-hygiene knowledge and attitude.
There were 946 questionnaires administered to the graduating students of the University of Technology with stratified random sampling and the respondents of valid questionnaires were 610.The response rate was 93%.
Using survey data from 610 respondents, the findings of the study were concluded as follows:
1. Safety-hygiene knowledge of students should be strengthened.
2. Safety-hygiene attitude of the students tended to be positive.
3. There was significant difference in different background variables to safety-hygiene knowledge and attitude of the students.
4. Safety-hygiene knowledge had positive correlation with the safety-hygiene attitude. In the other hand, the more safety-hygiene knowledge would cause the more positive safety-hygiene attitude.
5. The predictability on Safety-hygiene knowledge by safety-hygiene attitude.
