Abstract
This research wants to examine the competitiveness and potential development of Chinese township and village enterprises in the angle of managerial efficiency . Due to most literatures in DEA do not account for environmental effects and statistical noise. This research especially, considers those and wants to understand the internal to the firm’s inefficiency. Those are advantages of this research which are better than others.

Our data come from the Yearbook of Chinese township and village enterprises in 2001. This research will incorporate the effects of ownership, location characteristics and statistical noise.Due to information about Chinese township and village enterprises is rare. This research only can choose staff and real net value of fixed asset as input items, revenue as output item from the Yearbook of Chinese township and village enterprises in 2001.

This research will analysis Chinese township and village enterprises in the angle of PME and SE. The sequences are to compare all provinces first, second to compare between provinces，and last to compare across provinces in the angle of accounting for environmental effects and statistical noise or not.

The concludes of this research are that collective Chinese township and village enterprises can significantly reduce the inefficiency than private Chinese township and village enterprises in staff, so do it in real net value of fixed asset. In the aspect of location characteristics, east and middle areas can increase inefficiency than west area in staff,so do in real net value of fixed asset.
