The structure of board of supervisory and directors
Taiwan Corporate Credit Risk Index（TCRI）
Independent directors and independent supervisors

Abstract
In recent years, as incidences of company corruptions escalated, the role of corporate governance is emphasized. A good management control system includes well-developed internal and external controls. The board of directors and supervisory play an important role in internal control. This paper explores the relationship between the structure of board of supervisory and directors and Taiwan corporate credit risk (TCRI). We use Taiwan Corporate Credit Risk Index to measure the effectiveness of supervisory and directors.

Overall, our empirical results demonstrate that directors and supervisory have significant influences on the development of a business enterprise. Research results are as follows. The more directors and supervisory on the board the better, the enterprise's credit rating would be. Regarding to ownership structure, the larger the ratio of directors' holdings, the lower the pledge rate, and the higher the ratio of blockholders' holdings, the lower the credit riskof the enterprise would be. As for the independence of directors and supervisory board, worse if the director also served as a manager, the credit rating would be. In addition, the larger the company size and the return of asset (ROA), or the lower the debt-to-assets ratio TCRI would be better. Furthoremore, companies of the electronics industry also have a better TCRI.
