Abstract
英文摘要
Nowadays the military face the impact of the second force-restructure, the enforcement of downsizing and political alleviation gradually, thus how to accomplish the great capacity of fixing and maintaining is the core dimension of the future military logistic strategy. Therefore, owing to the gradual alleviative resources, in order to reduce the giant logistic labor cost and get the key effective managing objectives, the 『GO-CO』method is the most appropriate measure in the international trend.
The specific managing trait of the military factory, not familiar to the general commercial business, which is measured effectively by profit, is still possessing the management core from the political task, lacking of the internal competitive engine of the market, thus causing the weakness of high cost and low effectiveness.
To improve the weakness of resources waste and unbalanced allocation accurately from the public-servant-minded of the military factory, thus push the connective domestic aircraft maintenance and development of technological transformation, the national defense ministry capitalize on the 『GO-CO』method by choosing the second logistic command department of airforce as the first-step privatization department , and set model for the further privatization of the military factory through the benefit of military aircraft maintained by private department.
The research method adopt AHP method , gaining the research data through questionnaire , and come to realize that the human allocation problem is the most core factor during enforcing the military factory privatization , and provide the key consulting source for the further privatization of the military factory , and the basic contributions is realizing the key factor of GOCO is attainment of the tasks , the second is the human allocations ,and the third is the integration capability of the firms.
